

The MiniBox+™

for Pediatric Pulmonary Function Testing

Performing complete PFT's with a body box can be difficult for children.

- ▶ Sitting in a body box cabin can be a scary and claustrophobic prospect
- ▶ Repeated panting maneuvers can be exhausting and obtaining compliance challenging
- ▶ Testing for 45 minutes is too long

Introducing
the MiniBox+:
Spirometry, lung
volumes, & DLCO
in a compact,
portable, cabinless
plethysmography
device

It's cabinless.
No sensation of
claustrophobia or anxiety.

Measurements are
comfortable. Lung volumes
with tidal breathing only,
no panting required.

Testing time is short.
Complete PFT's take
only 15-20 min.

Children can be tested
from age 5.

MiniBox+ lung volumes have been proven equivalent to the body box
(data published in CHEST 2021; 159(6):2356-2365).

Testing is easy to perform and easy to interpret, with automatically
generated results. And... no maintenance costs. Period.
